

JOB DESCRIPTION

Position	Junior Application Developer
Reports To	Chief Information Officer (CIO)
Status	Full-Time; Exempt
Location	Maine; Remote Work

Position Overview

We are offering an exciting opportunity for a Junior Application Developer to join an innovative team dedicated to improving patient outcomes through information technology. You will collaborate with other developers on the various technologies of our health information exchange platform to develop and deploy application software. This position plays an important role as part of a team responsible for the analysis, development and maintenance of health data and related software products including clinician portals, APIs, analytics and data repositories. The person in this position must be an excellent communicator and capable of working in a high paced and demanding environment.

Position Duties and Responsibilities

Core Duties

- Assist senior developers with designing, developing and deploying software solutions that support business requirements
- Learn, maintain and enhance existing applications through team and individual efforts
- Test and evaluate applications and fix bugs
- Follow approved life cycle methodologies, create design documents, and perform program coding and testing
- Resolve technical issues through debugging, research, and investigation
- Develop a working knowledge of the technologies and systems core to HealthInfoNet/CI operations

Core Competencies

- Proficiency with HTML5, CSS and JavaScript
- Proficiency with Java and Java Application Servers
- Proficiency with MSSQL Server including the ability to write SQL queries
- Experience with web application development, web services and REST APIs
- Knowledge in application security and authentication including SSL, HTTPS, Active Directory
- Experience developing cloud based applications in Azure or AWS is a plus
- Working knowledge of Agile SDLC

Employment Standards

Education

- Bachelor's degree in computer science
- Technical certifications preferred

Experience

- Two years of software development experience
- Demonstrated willingness to collaborate and be mentored
- Knowledge of health care information technology and health care delivery systems is a plus

Working Conditions/Physical Effort

- Responsibilities may sometime require working evenings and weekends, sometimes with little advanced notice.
- No regular travel required.
