Data Dissemination Services

As data inputs are transformed into optimized outputs, they are packaged and delivered to our customers in consumable and actionable methods designed to help keep them informed of their patients' healthcare activities and population trends and patterns.

Electronic Health Record Systems

Giving participating providers the ability to securely look up and retrieve real-time health record information in a view-only screen at the point of care to improve individual safety and care coordination activities among treating providers.

Intelligent e-Notifications

Delivering real-time alerts of time-sensitive events (e.g., emergency department visits, critical lab results, hospital discharges, etc.) that make it possible for care managers and other providers following an individual's healthcare activities to intervene early and establish the right care plan for follow-on action.

Analytics & Reporting Platform

Producing use-case driven analytics and reporting that allow customers to review both aggregate and detailed information on their attributed populations related to quality performance indicators, predicted risk analytics, and utilization trends across key healthcare settings.

Electronic Health Record Systems

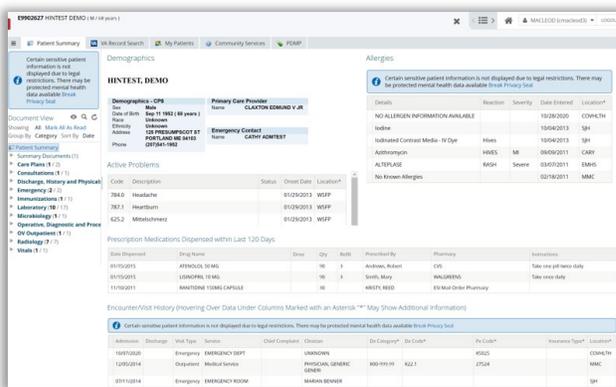

Our electronic health record systems help customers improve safety and care coordination activities among patients' care teams by gaining access to real-time health record information at the point of care.

Clinical Portal

A web-based platform that provides end users with a robust toolkit to make their workflows more efficient and care coordination activities more seamless.

Custom EHR Integrations

Other integration methods are possible upon customer request, including SAML, PBL, and other available standards.

Intelligent e-Notifications

Our notification services provide real-time alerting of time-sensitive events that make it possible for care managers and other providers to intervene early and establish the right care plan for follow-on action.

My Patients

Manual or automated creation of user-specific patient panels for monitoring specific medical events across defined patient populations.

My Subscriptions

Key medical events, including those required by the CMS Conditions of Participation e-notification rule, that users can receive notifications on for their defined patient panels in real-time or in daily-summary reports.

My Compliance Reports

Detailed compliance audit reports that track to whom and when specific notifications were sent and if their delivery were successful.

Intelligent e-Notification Subscription Options

- Patient is admitted/transferred to inpatient setting (including observation stays)
- Patient is discharged/transferred from inpatient setting
- Patient is discharged from inpatient setting
- Patient is presented to emergency department setting (including observation stays)
- Patient is discharged/transferred from emergency department setting
- Patient is discharged from skilled nursing facility
- New document is available for patient
- Final radiology report is available for patient
- Final laboratory result is available for patient
- New COVID-19 laboratory result is available for patient
- Interim microbiology result is available for patient
- Final microbiology result is available for patient
- Patient has been reported deceased

Analytic & Reporting Platform

Our team of analysts produce use-case driven analytics and reporting that allow our customers to review both aggregate and detailed information on their attributed populations in order to help:

- » Better target care for patients with chronic diseases in order to prevent complications and hospitalizations.
- » Identify patients most at risk for future utilization to prevent unnecessary emergency department and hospital visits, tests, and procedures.
- » Identify quality measure gaps to put performance improvement plans in place quicker.
- » Prevent unnecessary visits for high-cost and repeat services in order to establish lower out-of-pocket costs for patients and avoid penalties for readmissions and repeat tests and procedures.
